

COVID-19 Service Capabilities

As the pandemic continues to evolve through phases of escalation and de-escalation, WESS, a GardaWorld Company, remains on the front-edge of innovative security service solutions to meet the unprecedented challenges faced by businesses, communities and government entities. Several critical services that we can provide with minimal ramp-up time include:

No contact temperature screening

In March, the U.S. Equal Employment Opportunity Commission (EEOC) and Centers for Disease Control (CDC) issued guidance allowing employers to implement body temperature screening measures in response to the COVID-19 pandemic. In support of business continuity and return-to-work (RTW) plans, or ongoing operations post-COVID, GardaWorld proudly offers our No Contact Temperature Screening Services. Through the use of thermal camera technology, we are able to provide trained screening personnel who can identify individuals with a possible fever without making direct body contact, thus minimizing the risk of infectious disease spread. GardaWorld offers two options of thermal technology, or we can administer technology provided by the client.

Social distancing monitoring

Our guards are trained to have a keen eye and now, more than ever, it is important to be hyper-vigilant of crowd and line control management. Our guards are available to assist in social distancing monitoring in an effort to ensure the safety of visitors and employees.

Reinforcement of proper PPE protocols

In an effort to protect our clients, their visitors and our security professionals, our guards are now trained on proper PPE protocols and how to implement these precautionary measures.

GardaWorld is the largest privately owned security services company in the world. Our 102,000 highly trained, dedicated professionals serve clients across 45 countries. We are trusted by more than 35,000 clients worldwide, including governments. We earn our clients' respect with the quality of our services and the commitment of our people.
